

AHMED ABDERAOUF ZOBIR

AI / MACHINE LEARNING ENGINEER

Bordj El Bahri, Algeria | zobiraouf@gmail.com | +213 541 99 83 04
linkedin.com/in/raouf-zobir | github.com/raouf-zobir

PROFESSIONAL SUMMARY

AI/ML Engineer specializing in computer vision, deep learning, and intelligent systems, with hands-on industry experience developing AI agents and computer-vision solutions. Experienced in building end-to-end ML applications using CNN, LSTM, and YOLO, with a track record of winning four hackathons, including a national-level competition.

TECHNICAL SKILLS

Machine Learning & AI: Machine Learning, Deep Learning, Computer Vision, Object Detection (YOLO), Sequence Modeling (LSTM), Convolutional Neural Networks (CNN), AI Agent Development, TensorFlow, OpenCV, NumPy, Pandas, Scikit-learn

Programming: Python, Java, C, Dart (Flutter), HTML/CSS/JavaScript

Systems & Development: Embedded Systems, Smart Robotics, Mobile & Web Application Development

Tools & Collaboration: Git, GitHub, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

AI Engineer Intern, AIUnivers Company

Jun 2025 – Nov 2025

- Developed AI-agent and computer-vision components using Python, TensorFlow, and OpenCV for production smart-systems applications, contributing across design, implementation, and deployment.
- Integrated AI features into real-world applications in collaboration with cross-functional engineering teams, strengthening both technical execution and stakeholder communication.
- Extended a one-month trial internship into a five-month engineering role based on demonstrated technical performance and project contribution.

EDUCATION

B.Eng., Autonomous Systems & Ambient/Mobile Software (Artificial Intelligence)

Oct 2022 – Jun 2025

Numidia Institute of Technology (NIT), Algeria

- Specialized coursework in machine learning, computer vision, embedded systems, and intelligent robotics.
- Graduation thesis: designed a multimodal deep learning system for real-time video crime detection, integrating CNN, LSTM, and YOLO architectures for object detection, sequence modeling, and behavior analysis.
- Placed first in three university hackathons and one national-level competition, building functional AI prototypes under time constraints.

PROJECTS

Multimodal Crime Detection System

Graduation Thesis

- Developed an end-to-end real-time video analysis pipeline combining YOLO-based object detection, CNN-based visual feature extraction, and LSTM-based temporal sequence modeling.
- Designed the system to fuse visual and temporal data for automated behavior analysis and real-time threat identification.

Technologies: Python, TensorFlow, OpenCV, CNN, LSTM, YOLO, Computer Vision, Deep Learning

Home Services Hub

Academic Project, 2025

- Designed a two-sided marketplace platform connecting homeowners with skilled professionals, featuring job matching, service requests, and secure payment processing.

School Management Platform

Personal Project, 2024

- Built a full administrative platform with student/teacher profile management, AI-powered attendance tracking, secure payments, and automated communication.

AI Learning Repository

Self-Initiated, Ongoing

- Maintain a public GitHub repository of applied AI projects spanning image classification, NLP, and data analysis, used to document and refine ML engineering skills.

Technologies: Python, Machine Learning, Computer Vision, NLP, NumPy, Pandas, Scikit-learn

AWARDS & ACHIEVEMENTS

- **Future Caravans Hackathon** — 1st Place, National Competition
- **University Hackathons** — 1st Place × 3
