PROFESSIONAL PROFILE

Detail-oriented IT Support and Systems Administration professional with hands-on, self-directed experience designing, deploying and troubleshooting enterprise-style infrastructure across Windows Server, Linux, Active Directory, Microsoft 365, VMware and Hyper-V. Proven ability to diagnose and resolve hardware, software and network issues efficiently, backed by formal training from the University of Colorado and Google in system administration, security and technical support. Combines a rigorous scientific background in life sciences with a disciplined, methodical approach to root-cause troubleshooting and documentation. Seeking to bring reliable, customer-focused on-site technical support to Fujitsu Australia's service desk and infrastructure team.

CORE COMPETENCIES

IT Service Desk & Desktop Support • Windows Server Administration • Linux System Administration • Active Directory & Entra ID Fundamentals • Microsoft 365 & Exchange Administration • Virtualisation (VMware, Hyper-V) • TCP/IP Networking & Troubleshooting • Incident Management • Hardware & Peripheral Support • Technical Documentation • Group Policy & User Administration • System Monitoring & Maintenance

TECHNICAL SKILLS

Operating Systems: Windows 10/11 • Windows Server • Red Hat Enterprise Linux • Rocky Linux • Ubuntu Server • Debian • Fedora

Identity & Productivity Platforms: Active Directory (Fundamentals) • Entra ID (Azure AD) Fundamentals • Microsoft 365 Administration • Exchange (Fundamentals) • Group Policy • User & Access Administration

Virtualisation & Infrastructure: VMware Workstation • Hyper-V • Windows Server Roles & Features • File Services & Network Shares • DNS • DHCP

Networking: TCP/IP • Subnetting & Routing Fundamentals • Switching Fundamentals • VPN Basics • Network Troubleshooting

Support & Operations: Desktop & Hardware Support • Printer & Peripheral Support • Service Desk Ticketing Practices • Incident Management • System Documentation

Scripting & Tools: Bash Scripting • Basic PowerShell • Git • GitHub

PROFESSIONAL EXPERIENCE

Infrastructure Engineer (Self-Directed) — Enterprise Home Lab Environment

Ongoing, Independent Project — Oran, Algeria

Designed, built and maintained a multi-platform lab replicating enterprise IT infrastructure to develop production-grade system administration and support skills.

- Deployed and administered **Windows Server** and multiple **Linux distributions** (RHEL, Rocky, Ubuntu, Debian, Fedora), configuring core roles including Active Directory, DNS, DHCP and file/network shares.
- Provisioned and managed virtual machines across **VMware Workstation and Hyper-V**, replicating server and client environments used in enterprise data centres.
- Administered user accounts, permissions and group policy to simulate real-world **identity and access management** scenarios.
- Diagnosed and resolved hardware, software, OS and network faults across the environment, applying structured troubleshooting methodology to minimise downtime.
- Authored clear **technical documentation** for every build, covering configuration steps, network topology and troubleshooting logs — mirroring service desk knowledge-base standards.
- Automated routine administrative tasks (backups, monitoring, maintenance) using **Bash scripting**, improving repeatability and reducing manual effort.
- Maintained desktops, laptops, printers and networking hardware supporting the lab environment, covering the full lifecycle from setup to fault resolution.

Impact: Built practical, verifiable competency across the exact technology stack required for enterprise on-site support — Windows Server, Linux, AD, virtualisation and networking — without requiring formal employment history.

KEY PROJECTS

Enterprise Infrastructure Home Lab

Windows Server deployment · Active Directory · DNS/DHCP · VMware · Hyper-V · Linux administration · Network troubleshooting. A simulated enterprise environment used to practise end-to-end infrastructure deployment, identity management and fault diagnosis.

Linux Automation Toolkit

Bash-based backup, monitoring and system-maintenance scripts designed to reduce manual administrative overhead and demonstrate scripting proficiency for operational efficiency.

CERTIFICATIONS

- Linux Server Management and Security — University of Colorado (Coursera)
- Enterprise System Management and Security — University of Colorado (Coursera)
- Linux Fundamentals — LearnQuest (Coursera)
- Google Technical Support Fundamentals — Google (Coursera)
- Command Line Basics in Linux
- AWS S3 Basics

EDUCATION

Bachelor's Degree — Natural and Life Sciences (Parasitology)

University of Oran 1, Algeria

LANGUAGES

Arabic (Native) · English (Professional Working Proficiency) · French (Professional Working Proficiency)
