PROFESSIONAL SUMMARY

Full-Stack Developer and Computer Science graduate (HIS – Higher Institute of Sciences, Algiers, 2026) who builds and ships real, end-to-end products across web, mobile, and IoT using React, Node.js, Express, and PostgreSQL. Founder of LOKA, a live GPS livestock-tracking platform built from custom ESP32 firmware up to a real-time web dashboard, plus a four-month QA internship owning the manual testing cycle for a live consumer product. Comfortable across the stack, writing clean APIs and shipping fast in resource-constrained environments. Seeking a junior full-stack, frontend, or backend engineering role.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, C / C++, Java, PHP, Python
Frontend	React, React Native, HTML5, CSS3, TailwindCSS, Framer Motion
Backend	Node.js, Express.js, REST API design, Socket.IO / WebSockets
Databases	PostgreSQL, PostGIS, MySQL, SQL
IoT / Hardware	ESP32 / Arduino (C++), GPS / GNSS, LoRa, Leaflet / OpenStreetMap
Tools & Practices	Git, GitHub, Linux, VS Code, Postman, Vercel, Agile / MVC
QA & Testing	Manual testing, bug reporting, test-case design, feature validation

EXPERIENCE

Founder & Full-Stack Developer · **LOKA** 2026 – Present | Algiers, Algeria (Remote)

- Founded LOKA, a full-stack IoT platform that lets farmers and herders track livestock in real time and get alerted the moment an animal leaves a safe zone; selected to compete in the Qabilah Hackathon (live: loka-livetrack.vercel.app).
- Built the entire product from scratch: custom C++ firmware on a Heltec ESP32-S3 (GPS + LoRa + WiFi) streaming live coordinates every 10s to a Node.js/Express REST API, a live React/Leaflet dashboard, and a mobile app.
- Engineered the backend (position history, online/offline detection) and a fleet-management & geofencing simulator using PostgreSQL/PostGIS and Socket.IO for real-time status updates.
- Debugged low-level hardware in the field (GPIO mapping, UC6580 GNSS power sequence, ADC attenuation, WiFi instability), achieving <2 m accuracy with 15–18 satellites; shipped a multilingual dashboard (English / French / Arabic RTL).

Software QA & Testing Intern · **Herfa (Startup)** Sep 2024 – Dec 2024 | Algiers · On-site

- Owned the manual testing cycle end-to-end across multiple sprint releases of a live consumer web & mobile product.
- Designed and executed manual test cases across web and mobile surfaces, catching defects before production and reducing post-deployment bug reports.
- Documented and triaged 30+ bug reports with detailed reproduction steps, severity ratings, and environment data, helping developers resolve issues faster.
- Validated new features against requirements and acceptance criteria; contributed in Agile sprint planning and review sessions.

PROJECTS

AI-Powered English Learning Platform React · Node.js · TypeScript

- Built solo — a full-stack learning app combining AI-driven lessons, spaced-repetition vocabulary, and a personalized learning path to help users improve their English efficiently.

Developer Portfolio Website React · TailwindCSS · Framer Motion · Vercel

- Designed and built a fast, responsive personal portfolio showcasing projects and live demos, deployed on Vercel (abdeldjaouad-farid.vercel.app).

EDUCATION

Bachelor's Degree in Computer Science · **HIS — Higher Institute of Sciences** Oct 2023 – Jul 2026 | Algiers, Algeria

- Relevant coursework: Data Structures & Algorithms, Databases, Operating Systems, Networks, Linux, Software Engineering.
- Skills developed: JavaScript, TypeScript, Node.js, React, PostgreSQL, Git — applied in real projects.

LANGUAGES

Arabic	Native / Fluent
French	Professional working proficiency
English	Intermediate (technical reading, writing, communication)
