Skills

OBD2 diagnostics,
Microprocessor,
CAN bus ,
Embedded Systems,
Microcontrollers,
Arduino,
TIA Portal,
Programming: C++ ;
MATLAB,
Communication Protocols
TCP UDP,
Signal Processing,
Fourier Transform,
Z-Transform,
DSP,
Electronic Circuits.

Languages

English

Arabic

French

An engineer with a Master's degree in Embedded Systems and a Bachelor's degree in Electronics from Amar Telidji University, Laghouat, Algeria. My background combines both solid academic achievements and practical experience. Professionally, I've worked as an Automotive Diagnostic Technician at Renault, where I specialized in OBD2 diagnostics and maintaining vehicle electronic systems.

During my studies, I led two major projects: one involved developing a simulation model for an automated shrink-wrapping machine at Moulai Gazueuse, a local beverage company, and the other focused on designing an energy-efficient lighting system using microcontrollers and sensors. My technical expertise spans embedded systems, microprocessors, automotive electronics, and PLC programming with TIA Portal, complemented by proficiency in C++ and MATLAB.

This comprehensive experience as an engineer equips me to contribute effectively to advanced research and innovative projects in the field of automotive electronics and automation.

Personal Information

- Date of birth: 04/21/98
- Nationality: Algerian

Work History

2023-08 - 2024-12	Automotive Diagnostic Technician <i>Renault, Laghouat, 03</i> • Diagnosed and repaired vehicle electrical and electronic systems • Worked with sensors, and OBD2 diagnostics
----------------------	--

Education

2020-09 - 2022-09	Master's Degree: Embedded Systems <i>Amar Telidji University - Laghouat</i> • Master's Graduation Project: Simulation of a Shrink-Wrapping Machine for Soda Bottles • Conducted at Moulai Gazueuse, a beverage production company
----------------------	---

- Designed and simulated an automated shrink-wrapping process for soda bottles
- Implemented PLC programming using TIA Portal for machine automation
- Optimized the system for efficiency, speed, and energy consumption

2016-09 -
2020-09

Bachelor's Degree: Electronics

Amar Telidji University - Laghouat

- Bachelor's Graduation Project: Smart Economic Lighting
- Developed an energy-efficient lighting system using microcontrollers and sensors
- Designed circuits to automatically adjust lighting based on ambient light levels
- Used Arduino and sensors for real-time energy optimization
- Aimed at reducing power consumption in residential and commercial buildings
